1 Using the Portal

In this chapter

About the Operations Database Portal 6
System requirements 7

About the Operations Database Portal

The Operations Database Portal provides many advanced features for analyzing, visualizing, and reporting the AfDB projects data for all African countries including multinational projects. The portal's functionality works entirely in a Web browser such as Microsoft Internet Explorer, Google Chrome and Mozilla Firefox.

This user guide describes the portal's features and provides step-by-step instructions for using them.

System requirements

To ensure trouble-free operation of the Operations Database Portal, please check that your computer meets the following requirements.

Operating system	Any
Browser	Microsoft Internet Explorer 8.0 or higher, Mozilla Firefox 16 or higher, Google Chrome 23 or higher
Additional software	Microsoft Word, Microsoft Excel, and Adobe Acrobat Reader are recommended for opening certain types of downloadable content

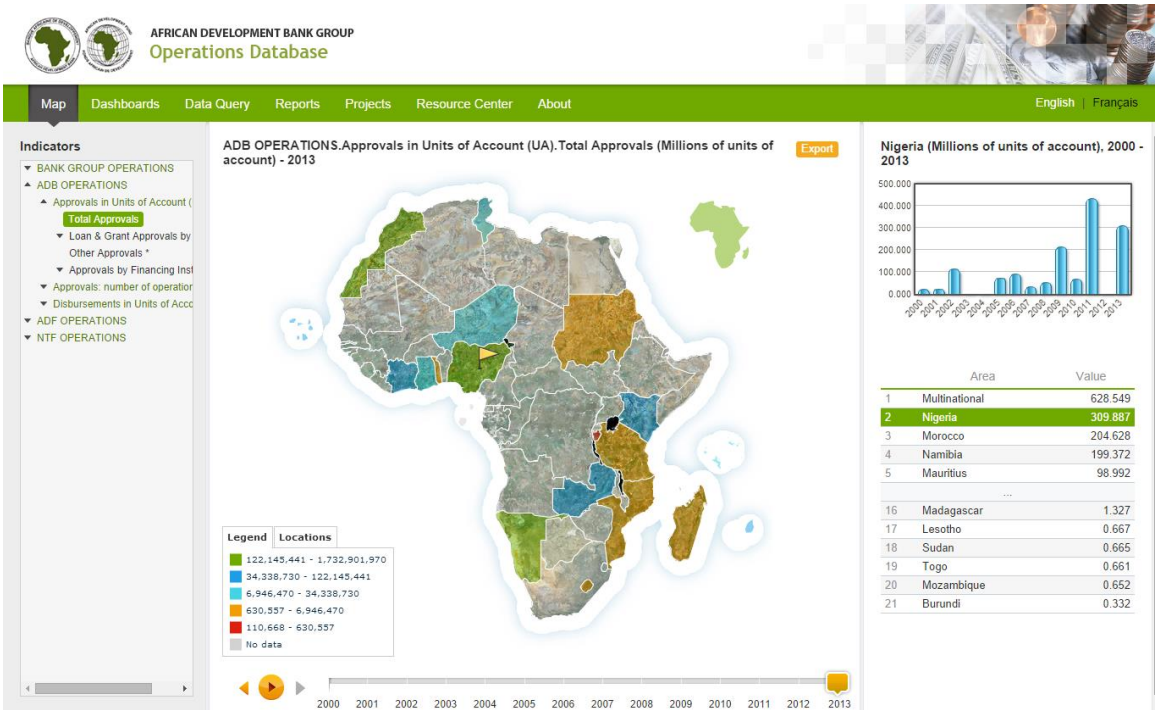
2 Map

In this chapter

About Maps 9
Using the map 12
Visualizing a source and an indicator on the map 12
Viewing Country details 12
Using the legend 13
Exporting the map 15

About Map

The Map page of the portal enables you to visualize any indicator in any of several preset years on an interactive map of Africa.



- **To browse to the Map page,** choose Map from the navigation bar.

Using the map

The map offers several convenient functions, all of which you can activate with one or two mouse clicks.

Visualizing a source and an indicator on the map

- **To visualize an indicator on the map**, click the desired indicator in the list on the left. The portal visualizes the selected elements on the map.
- **To change the year,** click the year point directly below the map.

Viewing country details

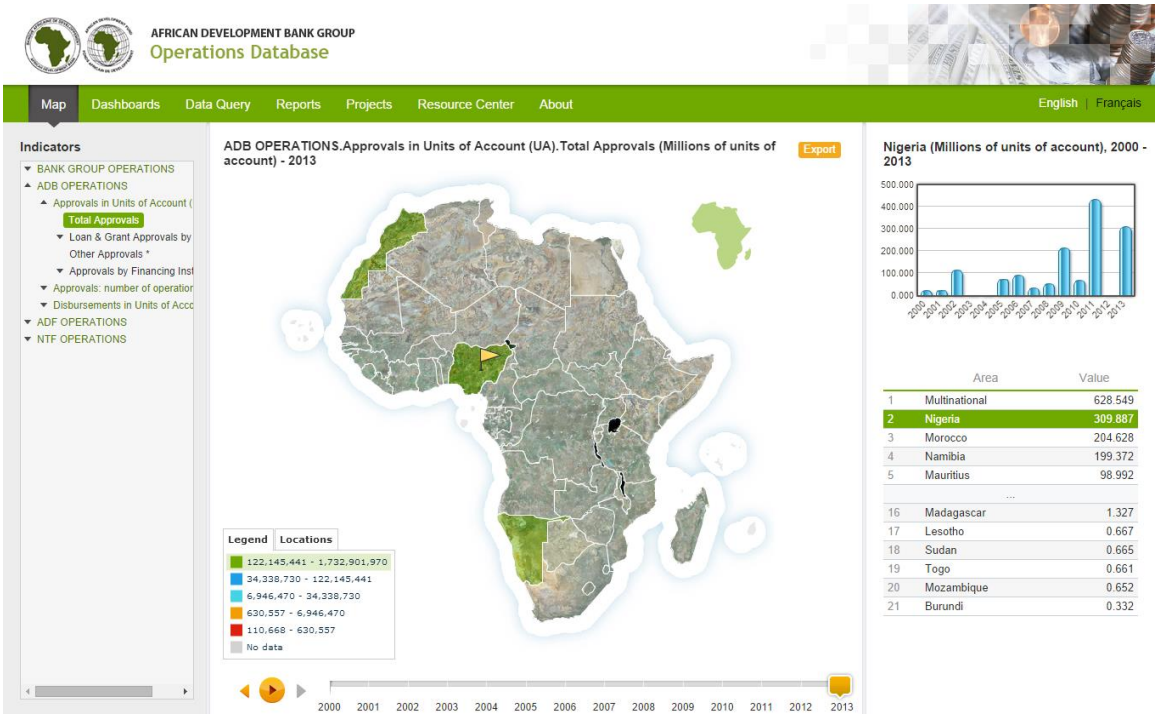
The details for the currently selected country include a chart comparing the countries data over all years and a list giving the countries rank in this particular source and indicator.

- **To view details for a particular country,** click this country on the map or its name in the table on the right.

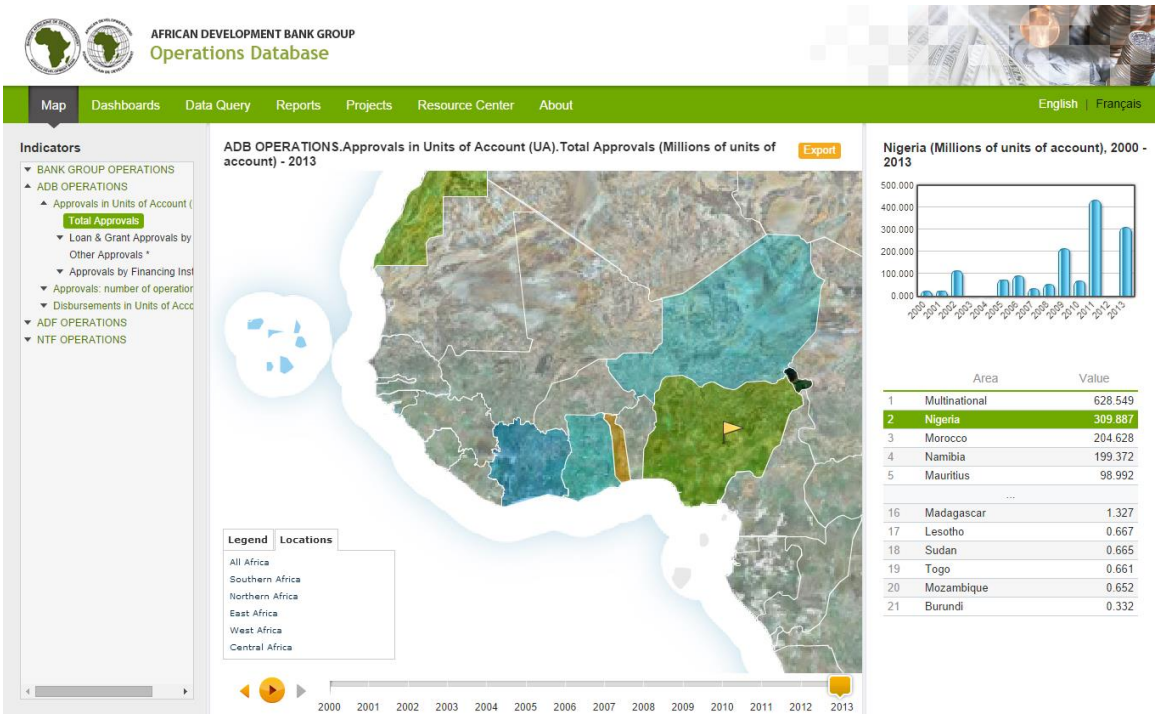
Using the legend

The map's legend enables you to highlight only those provinces that belong to a specific range of data.

- **To highlight the country with specific range of data**, hover over the desired range with the mouse pointer. You do not need to click the mouse button to see this effect.



- **To focus on a particular region of the map**, such as Northern Africa, switch to the Locations tab, and choose the desired region.



Exporting the map

The Map page of the portal enables you to export any indicator in any of several preset years to the PNG graphics file format.

- **To export map to a PNG file,** click the Export button above the map.

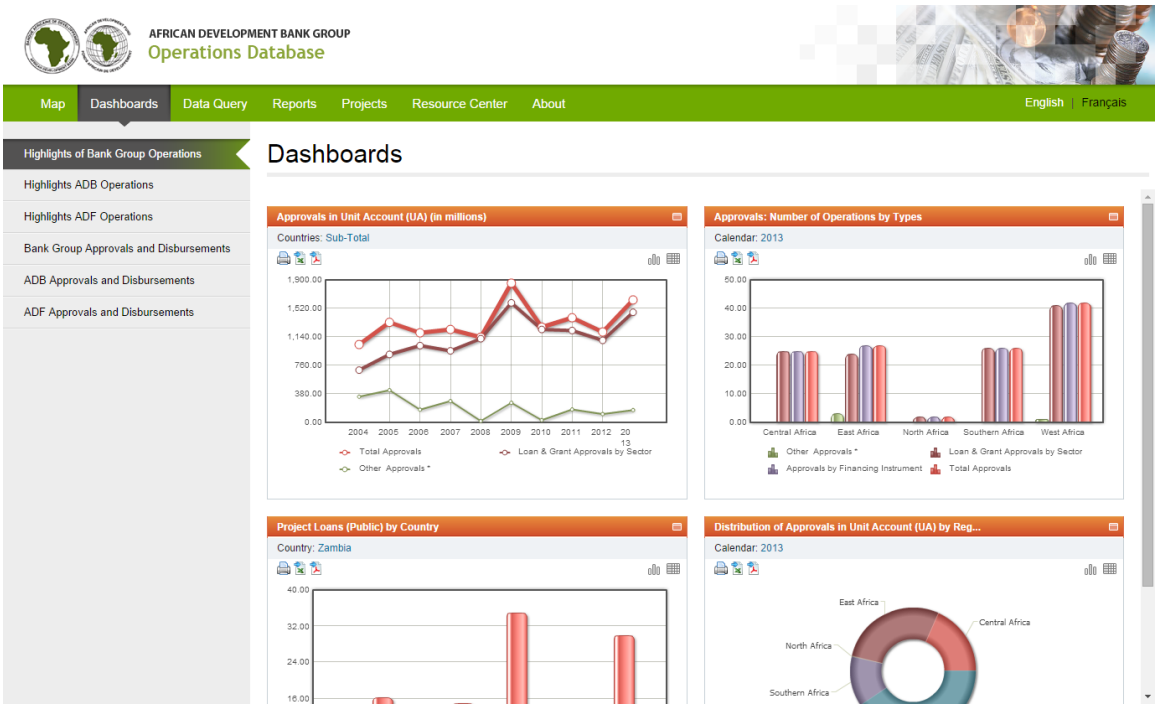
3 Dashboards

In this chapter

About Dashboards 17
Working with dashboard visualizations 18
Printing and exporting the dashboard document 19
Printing the results 19
Exporting the results 19

About Dashboards

The Dashboards page of the portal shows tables, charts, and maps for various indicators. The visualizations that you get for any given indicator are built into the portal; you cannot modify these preset types directly, although, for your convenience, you can change any chart or map into a table and back again with a simple mouse click.



- **To browse to the Dashboards page,** choose Dashboards from the navigation bar.

Working with dashboard visualizations

To view the dashboards for a group of indicators, click on the desired dashboard document on the left side of the browser window. The portal displays this indicator's preset dashboard visualizations in the results area. Each dashboard appears in its own frame.

- **To maximize or minimize a dashboard frame,** click the Maximize/Minimize icon in the upper right corner of the dashboard frame. A maximized dashboard frame expands to fill more of the screen, while a minimized one sits comfortably beside its neighbor.
- **To view a chart or map in table form,** click the As Table button just above the chart or map.
- **To view a table in its designated graphical form, whether chart or map,** click the As Chart button or As Map button as applicable. This button appears just above the table.

TIP The map dashboard includes Legend, just like the large map in the Maps page. For instructions on how to use these controls, see "Using the map" in Chapter 2.

Printing and exporting the dashboard document

The portal enables you to print the dashboard document or your printer or export them to one of two external file formats.

Printing the results

To print the dashboard document, follow these steps:

- Click the Print Preview button in the toolbar. The portal opens a new browser window containing a printer-friendly version of the results.

Click the browser's Print button. Your browser sends the printer-friendly version of the results to your printer.

Exporting the results

To export the dashboard document to an external file format, follow these steps:

- In the toolbar, click the button corresponding to the file type to which you want to export the results:
  - **Export to XLS** . This format opens in Microsoft Excel.
  - **Export to PDF** . This format opens in Adobe Acrobat.

The portal opens a new browser window, prepares the external file, and initiates your browser's procedure for downloading files. For example, in Microsoft Internet Explorer, the File Download dialog box appears; click Save to save the exported file to your computer.

4 Data Query

In this chapter

About Data Query 23
Selecting the elements 24
Selecting elements from the dimension 24
Searching for elements in a dimension 25
Using a dimension's list context menu 25
Constructing the data view 26
Viewing the results 26
Working in the Table mode 27
Working in the Chart mode 28
Working in the Map mode 29
Printing and exporting the results 30
Printing the results 31
Exporting the results 31

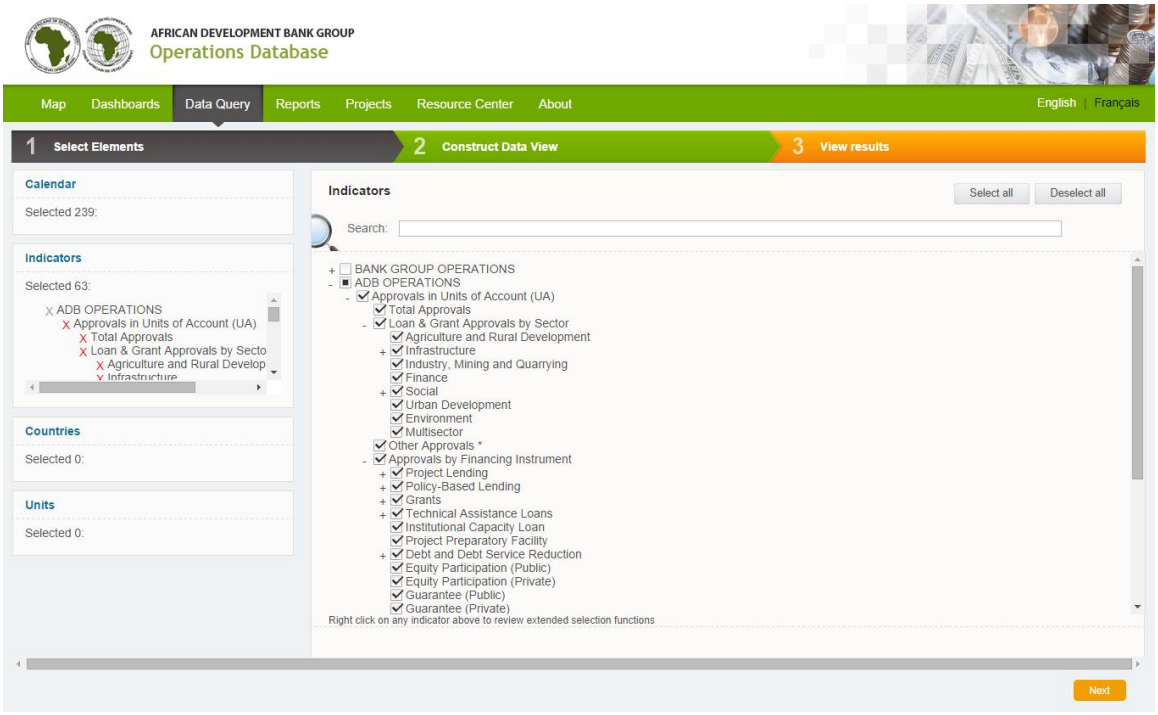
About Data Query

The Data Query wizard of the portal offers a powerful tool for data visualization in table, chart, and map mode..

- **To browse to the Data Query page,** choose Data Query from the navigation bar.

Selecting the elements

In First step of the wizard, you select the data to be downloaded in the last step of the wizard.



- **To go to the next step of the wizard,** click Next.
- **To change the data source,** click Back.

Selecting elements from the dimension

To select the elements from the dimension, do either of the following:

- Select the dimension by clicking its title in the list on the left side of the browser window, and check the checkboxes near the desired elements.
- Use the Select All and Deselect All buttons to select or deselect all elements in the list.

Searching for elements in a dimension

To find an element quickly, use the Search tool above the dimensions elements field. Type the text to find, and the portal displays all element names that contain this sequence of characters in the dimension box's drop-down menu.

Using a dimension's list context menu

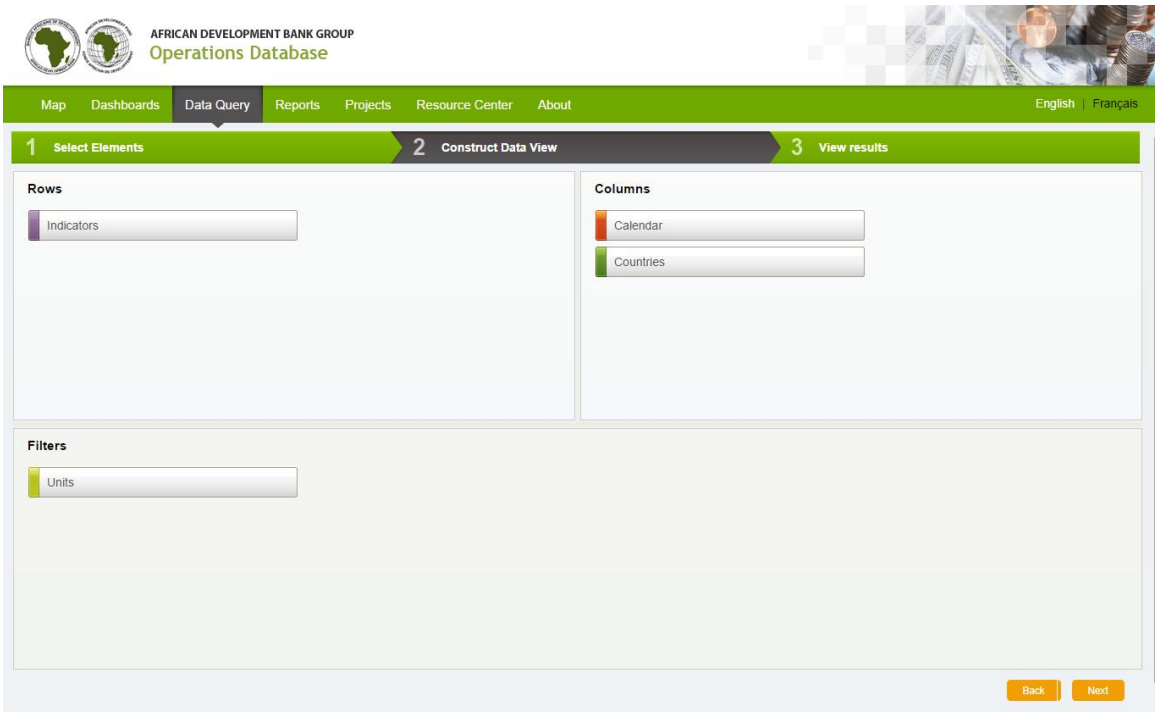
You can also right-click any element in the open dimension box for a context menu of time-saving commands:

- **Select All.** The tool selects all the elements in the dimension.
- **Deselect All.** The tool deselects all the elements in the dimension.
- **Select Level.** The tool selects all the elements at the same level in the hierarchy as current element.
- **Deselect Level.** The tool deselects all the elements at the same level in the hierarchy as the current element.
- **Select Children.** The tool selects all the child elements of the current parent.
- **Deselect Children.** The tool deselects all the child elements of the current parent.
- **Expand All.** The tool expands all parent elements.
- **Collapse All.** The tool collapses all parent elements.

NOTE Not all context menu commands are available in every dimension box.

Constructing the data view

The Construct Data View step enables you to construct the table and chart that will be displayed in the last step of the wizard.



Notice that these dimensions are arranged into three positions: Columns, Rows, and Filters, which correspond to the columns, rows, and cell data of the results table. Dimensions in the Filters position can have only one selected element at a time, while dimensions in Columns and Rows positions support multiple element selections.

- **To change the position of a dimension**, drag and drop it.
- **To change the order of the dimensions in the field**, drag and drop the dimensions.
- **To go to the next step of the wizard**, click Next.
- **To change the selection of elements**, click Back.

Viewing the results

The View Results step provides three data visualization types for selected data: table, chart, and map.

Working in the Table mode.

The Table mode displays data in the table form. This mode is the default view in the Data Query module. To show Table mode, click the Table button in the toolbar.

Then do any of the following:

- To hide the empty values, click the Filter button in the toolbar.
- To increase the decimal precision of rounded table values, click the Increase Decimal button in the toolbar above Table view.
- To decrease the decimal precision of rounded table values, click the Decrease Decimal button .
- To change the visualized fixed element, do any of the following:
  - Select the desired element in the drop-down menu in the top right corner of the browser window.

- Click the button near the drop-down menu to visualize the next indicator in the list.
- Click the button near the drop down menu to visualize the previous indicator in the list.

Working in the Chart mode

The Chart mode enables to display data in chart form. You can show Chart mode by clicking the Chart button .

> **NOTE** Use the drop-down menu and buttons near it to change the visualized fixed element (see "Working with Table mode" previously in this chapter).

The portal provides seven different chart types. To change the chart type, click any of the following toolbar buttons:

- **Line**. To apply this type of chart, click the Line button .
- **Column**. To apply this type of chart, click the Column button .
- **Bar bottom-up**. To apply this type of chart, click the Bar Bottom-Up button .
- **Stacked column**. To apply this type of chart, click the Stacked Column button .
- **Stacked bar bottom-up**. To apply this type of chart, click the Stacked Bar Bottom-Up button .

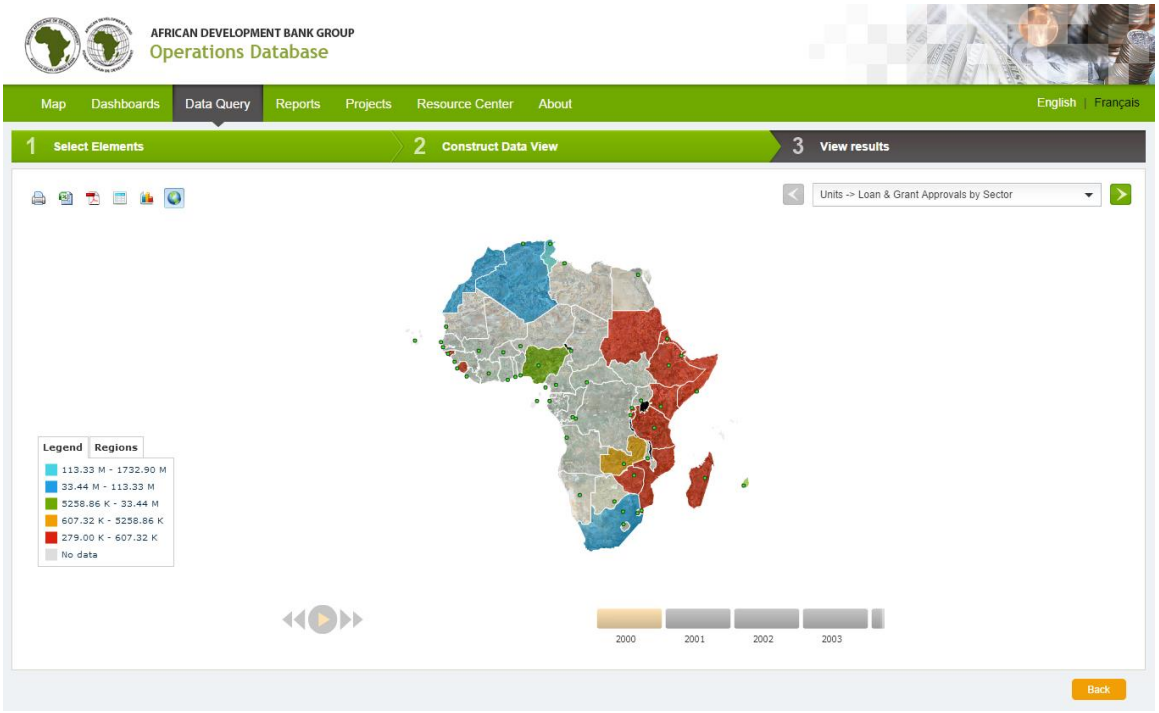
- **Area**. To apply this type of chart, click the Area button .
- **Pie**. To apply this type of chart, click the Pie button .

NOTE Use the Filter button to hide empty values.

Working in the Map mode

The Map mode visualizes data on the interactive map of the world. You can show Map mode by clicking the Map button in the toolbar.

To visualize an indicator on the map, expand the drop-down menu in the top left corner of the browser window, and click an element to select it. The portal visualizes selected elements on the map.

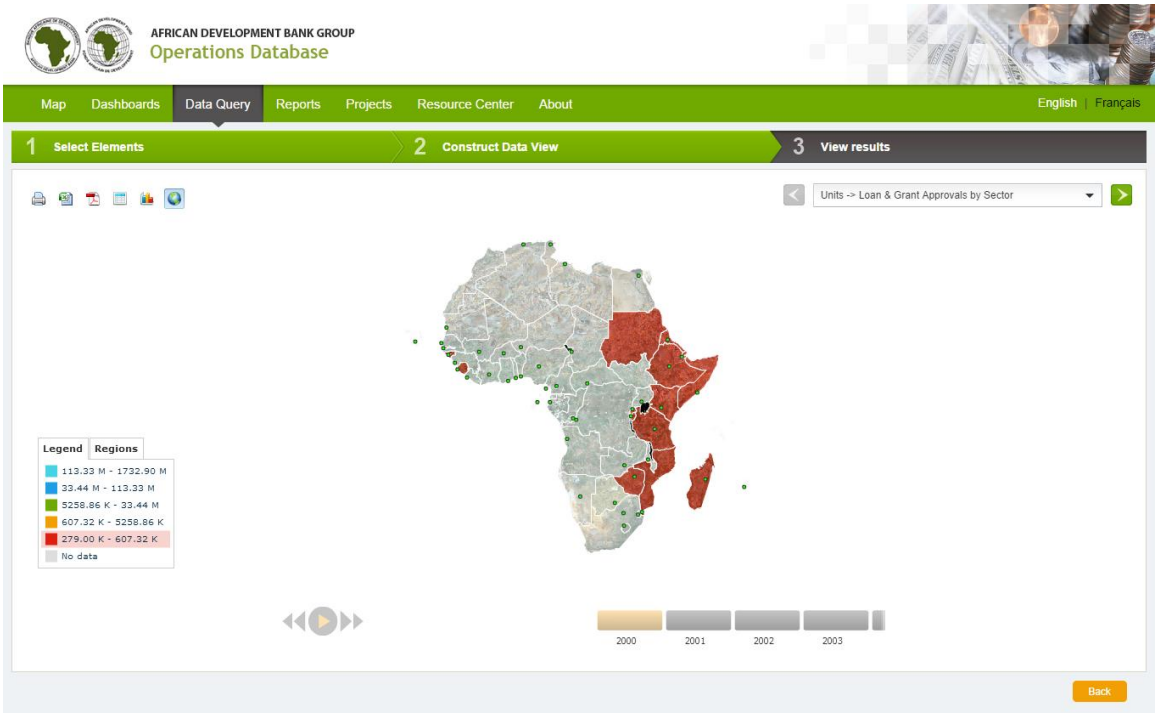


- **To change the year**, click the corresponding year below the map:

NOTE Use the buttons near the drop-down menu to change the visualized element.

Using the legend

The map's legend enables you to highlight only those countries that belong to a specific range of data. To do so, switch to the Legend tab if necessary, and hover over the desired range with the mouse pointer. You do not need to click the mouse button to see this effect.



Printing and exporting the results

The portal enables you to print the table and chart or your printer or export them to one of two external file formats.

Please note that the current mode of the results area—Table mode, Chart mode, or Table-Chart mode—determines exactly what the portal prints or exports. For example, if Table view is currently hidden because you have enabled Chart mode, then the portal ignores the table and prints or exports the chart only.

Printing the results

To print the results, follow these steps:

- Click the Print Preview button in the toolbar. The portal opens a new browser window containing a printer-friendly version of the results.
- Click the browser's Print button. Your browser sends the printer-friendly version of the results to your printer.

Exporting the results

To export the results to an external file format, follow these steps:

- In the toolbar, click the button corresponding to the file type to which you want to export the results:
  - **Export to XLS** . This format opens in Microsoft Excel.
  - **Export to PDF** . This format opens in Adobe Acrobat.
- The portal opens a new browser window, prepares the external file, and initiates your browser's procedure for downloading files. For example, in Microsoft Internet Explorer, the File Download dialog box appears; click Save to save the exported file to your computer.

- **To browse to the Reports page,** choose Reports from the navigation bar.

Customizing a report

The portal's report enable you to change the selection in the calendar, indicators and countries lists. The customizable dimension appears in a list of dimension boxes on the left side of the browser window. The dimension box contains selectable elements or items, which represent the data that appears in the report.

- To open a dimension box, click the inverted triangle on its right side. A drop-down menu of selectable elements appears.
- To close the dimension box, click anywhere outside it.
- To resize the dimension box, drag the handle in the upper right corner of the drop-down menu.
- To select or deselect an element from the dimension box, click the element in the drop-down menu.

After you change the element selection of a dimension and close the dimension box, the portal automatically updates the data in your report. To refresh the data in the report manually, click the Refresh button in the toolbar.

Viewing projects data

You can drill-down to particular value and see the projects data.

To get back to indicators data please click on the Indicators link at the top of the table.

Using the dimension box's context menu

You can also right-click any element in the open dimension box for a context menu of time-saving commands:

- **Select All**. The portal selects all the elements in the dimension.
- **Deselect All**. The portal deselects all the elements in the dimension.
- **Select Siblings**. The portal selects all the elements at the same level in the hierarchy as current element.
- **Deselect Siblings**. The portal deselects all the elements at the same level in the hierarchy as the current element.
- **Select Children**. The portal selects all the child elements of the current parent.
- **Deselect Children**. The portal deselects all the child elements of the current parent.
- **Collapse All**. The portal collapses all parent elements.

NOTE Not all context menu commands are available in every dimension box.

Printing and exporting the results

The portal enables you to print the table or export them to one of two external file formats.

Printing the results

To print the results, follow these steps:

- Click the Print Preview button in the toolbar. The portal opens a new browser window containing a printer-friendly version of the results.
- Click the browser's Print button. Your browser sends the printer-friendly version of the results to your printer.

Exporting the results

To export the results to an external file format, follow these steps:

- In the toolbar, click the button corresponding to the file type to which you want to export the results:
  - **Export to XLS** **.** This format opens in Microsoft Excel.
  - **Export to PDF** **.** This format opens in Adobe Acrobat.
- The portal opens a new browser window, prepares the external file, and initiates your browser's procedure for downloading files. For example, in Microsoft Internet Explorer, the File Download dialog box appears; click Save to save the exported file to your computer.

- **To browse to the Projects page,** choose Projects from the navigation bar.

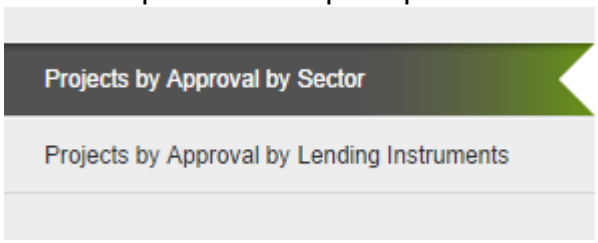
Exploring Projects types

The Projects page provides two built-in reports:

- **Projects by Approval by Sector.** This report displays data for approvals by sectors.
- **Projects by Approval by Lending Instruments.** This report displays data for approvals by different lending instruments.

Viewing a report

To view a report, click the report in the Reports panel on a left.



The portal loads this report in the results area of the interface and supplies default data. You may change the default selection in one or more of the report dimensions as you require (see "Customizing a report" later in this section).

Customizing a report

The portal's built-in reports enable you to change the selection in the countries list or in the calendar dimension. The customizable dimension appears in a list of dimension boxes on the left side of the browser window. The dimension box contains selectable elements or items, which represent the data that appears in the report.

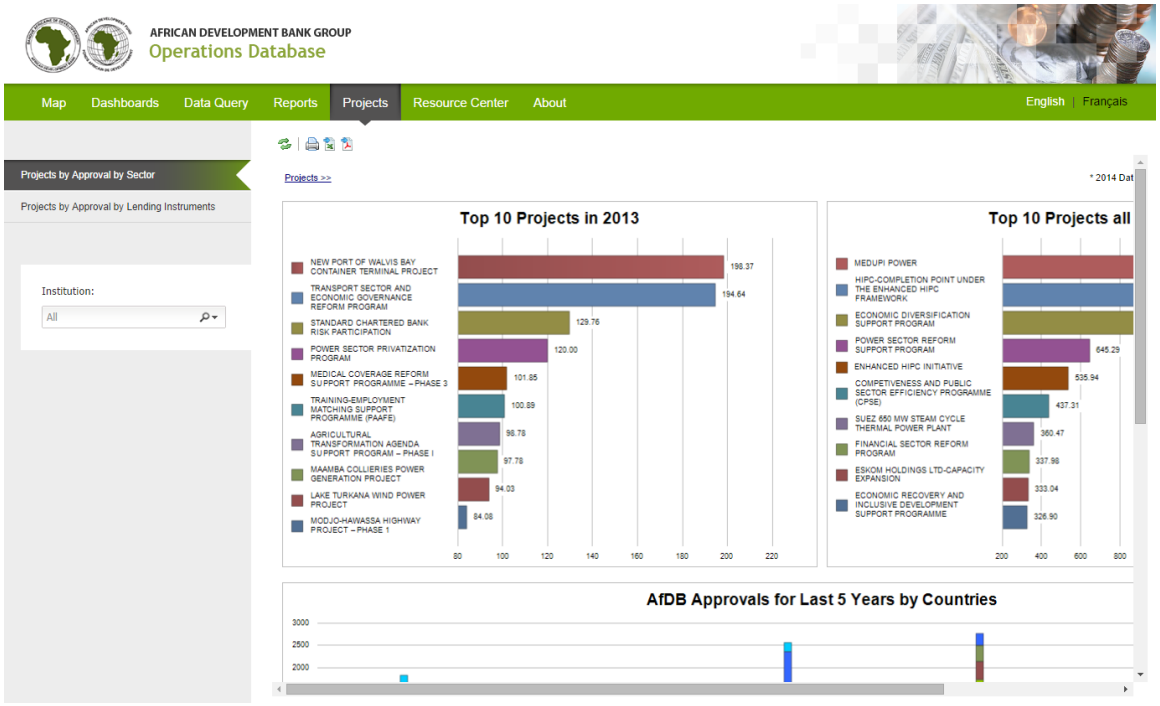
- To open a dimension box, click the inverted triangle on its right side. A drop-down menu of selectable elements appears.
- To close the dimension box, click anywhere outside it.
- To resize the dimension box, drag the handle in the upper right corner of the drop-down menu.

- To select or deselect an element from the dimension box, click the element in the drop-down menu.

After you change the element selection of a dimension and close the dimension box, the portal automatically updates the data in your report. To refresh the data in the report manually, click the Refresh button in the toolbar.

Viewing project dashboards

You can switch to Chart tab by the link above the table and see the projects data via charts.



To get back to projects data please click on the Projects link at the top of the page.

Using the dimension box's context menu

You can also right-click any element in the open dimension box for a context menu of time-saving commands:

- **Select All**. The portal selects all the elements in the dimension.
- **Deselect All**. The portal deselects all the elements in the dimension.

- **Select Siblings**. The portal selects all the elements at the same level in the hierarchy as current element.
- **Deselect Siblings**. The portal deselects all the elements at the same level in the hierarchy as the current element.
- **Select Children**. The portal selects all the child elements of the current parent.
- **Deselect Children**. The portal deselects all the child elements of the current parent.
- **Collapse All**. The portal collapses all parent elements.

NOTE Not all context menu commands are available in every dimension box.

Printing and exporting the results

The portal enables you to print the reports or export them to one of two external file formats.

Printing the results

To print the results, follow these steps:

- Click the Print Preview button in the toolbar. The portal opens a new browser window containing a printer-friendly version of the results.
- Click the browser's Print button. Your browser sends the printer-friendly version of the results to your printer.

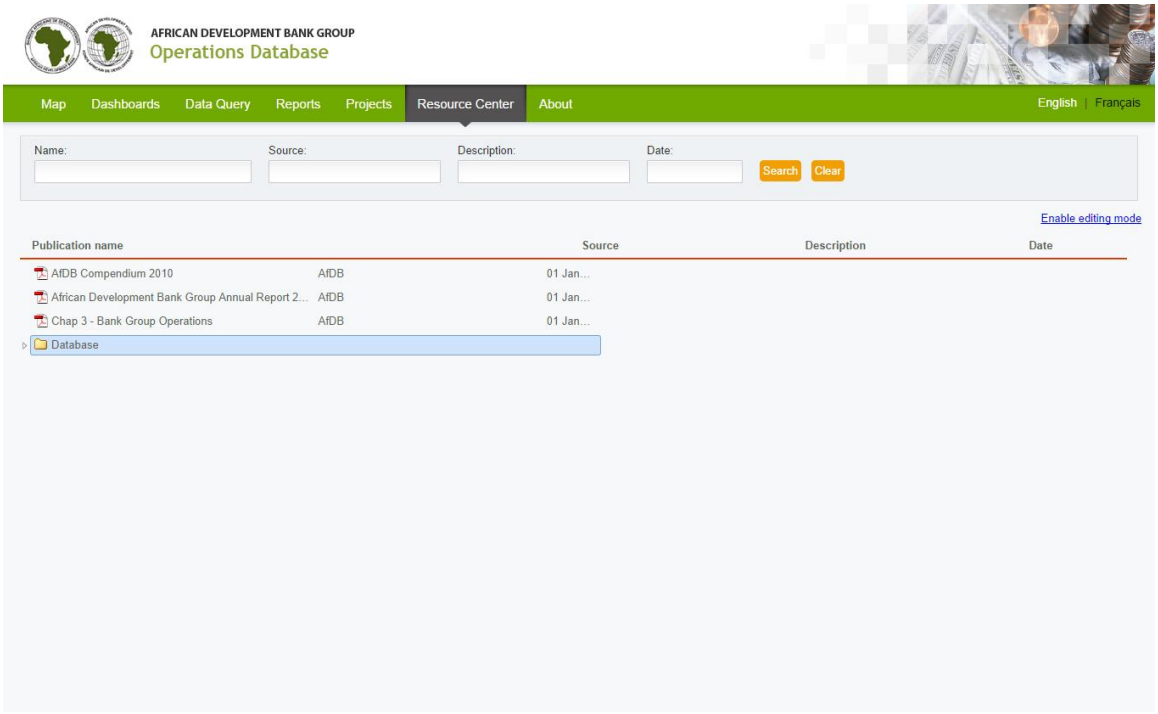
Exporting the results

To export the results to an external file format, follow these steps:

- In the toolbar, click the button corresponding to the file type to which you want to export the results:
    - **Export to XLS** **.** This format opens in Microsoft Excel.
    - **Export to PDF** **.** This format opens in Adobe Acrobat.
- The portal opens a new browser window, prepares the external file, and initiates your browser's procedure for downloading files. For example, in Microsoft Internet Explorer, the File Download dialog box appears; click Save to save the exported file to your computer.

7 Resource Center

The Resource Center page of the portal enables you to browse and download various documents and publications.



- **To browse to the Resource Center page,** choose Resource Center from the navigation bar.
- **To download a resource, double-click its publication name.** The portal opens a new browser window and initiates your browser's procedure for downloading files. For example, in Microsoft Internet Explorer, the File Download dialog box appears; click Save to save the file to your computer.

The African Dvelopment Bank Launches Operations Data Portal (ODP)
The Operations Data Portal (ODP) is a one-stop-shop web-based platform that consolidates information and data on approvals and disbursements of Bank Group operations on all Regional Member Countries since the inception of the Bank. The approvals information include the traditional loans, grants and lines of credit, private and public equity investments, emergency operations, HIPC debt relief, loan reallocations and guarantee, Post Conflict Country Facility and Special funds operations such as the African Water Fund (AWF), the Rural Water Supply and Sanitation Initiative (RWSSI), the Climate Investment Funds (CIF), the Congo Basin Forest Fund (CBFF). The approvals information are provided on a time series basis with sector, financing instruments, region and window classifications while the disbursements information include only disbursements on loans and grants with sector classification.
The AfDB Operations database Portal (ODP) features visually-compelling interactive maps and an analytical interface to create and share customized reports in one user-friendly platform. The Portal is available in both English and French.
This Platform is a work-in-progress and will continue to be improved, updated and complemented over time in particular with regard to the refinement and addition of indicators, as they become available. We welcome your comments to enable us improve on this service.
As part of its Public Disclosure Policy, the Bank is making this portal publicly available.
For assistance on using the Operations Data Portal, contact: Fessou LAWSON: f.lawson@afdb.org and Penthesilea LARTEY: p.lartey@afdb.org (on analytical reports and data issues); Christophe Baradandikanya: c.baradandikanya@afdb.org (on IT issues).
Preface
Compendium of Statistics on Bank Group Operations 2010 is an annual publication of the African Development Bank Group, presenting data on operational activities of the Bank Group. Part One gives cross-country statistics on Bank operations and Part Two provides country-specific information on each regional member country of the Bank.
The Staff Team
Compendium of Statistics on Bank Group Operations 2010 was prepared in the Economic and Social Statistics Division of the Statistics Department. The staff team was led by Beejaye Kokil and included Fessou Lawson and Penthesilea Lartey. The publication was prepared under the general direction of Charles Leyeka Lufumpa.
General Notes
Comparability of data with previous editions
Beginning with the 2001 edition of the Compendium, sector lending data have been reclassified to better refl ect the priorities of the Bank Group as espoused in its Vision Statement. The sector reclassification also provides greater transparency and more details on the activities supported by the Bank Group in fostering social and economic development in regional member countries (RMCs). The changes include the introduction of five newly defined sectors: urban development, environment, poverty alleviation and microfinance, gender, population and nutrition, and fi- nance. Poverty reduction operations, which were originally classified under multisector, have now been assigned to the social sector – which also contains education and health projects. Similarly, agricultural and industrial lines of credit have been moved from the agriculture and industry sectors, respectively, to the newly defined finance sector. This sector also includes other non-bank financial operations previously recorded under the multisector. Agro-industrial projects
